Dear Drew,

I am thrilled to address myself to you and apply for the Front-End Engineer position at Coral Gardeners. With a strong background in front-end development, including 3D image processing, visual dissemination, Firebase, and database management, I am eager to leverage my skills to support your mission of ocean conservation.

I became captivated by Coral Gardeners after casually following Diplo's first visit a few years ago and have passionately followed your work ever since. After years of trying, I got Patricio's email and connected with Kayla, an ex-employee, assisting her with her ReefCheck minimal data analysis for Catalina Island, thinking it would lead me to work for you but to no avail.

As a university student, I am aware I can only provide part-time involvement. However, given I do not start for another eight weeks I propose to work under your guidance for four weeks without remuneration. If my performance meets your expectations, I would be thrilled to continue working part-time during the academic year, with the potential to relocate on-site and work full-time during winter and summer breaks. I am confident that my dedication and skills will exceed those of other candidates.

My commitment to ocean conservation is deeply personal. I have participated in various ocean-related activities, including lifeguarding for the RNLI, freediving, and been part of Atlantic Pacific International Rescue's team focused on the Mediterranean migration crisis. My multilingual abilities in Spanish, French, and English and experience in French overseas territories and the Melanesian Islands enable me to communicate effectively in diverse environments, furthering the global reach of Coral Gardeners' initiatives.

I am driven by the thesis that since the current investment represents only a tenth of the funds needed to meet the various conservation needs, in order for conservation to be sustainable, it needs to be profitable. Similar to Stripe's model of bringing cutting-edge technology to SMEs and capitalizing from their growth, I believe the key lies in providing cutting-edge technology to parks and capitalizing from the growth from these parks to save our Earth. Coral Gardeners' model and heavy focus on technology and information dissemination are key in my opinion in achieving this vision.

I am excited about the possibility of contributing to your lab's mission to save our reefs. Thank you for considering my application. I look forward to discussing how my background, skills, and passion align with your goals.

Let's save the reef together!

Warm regards,
Pablo Berlanga Boemare
